EDUCATION

Bachelor of Science (B.S.) in Computer Engineering

Master of Science (M.S.) in Computer Engineering (*expected June 2026*)

University of California, Santa Cruz – Santa Cruz, CA

September 2021 – Present

GPA: 3.5

Relevant Coursework: Programming Abstractions, Computer Systems and C Programming, Introduction to Data Structures and Algorithms, Principles of Computer Systems Design, Computer Systems and Assembly Language, Computer Architecture, Introduction to Computer Networks, Network Programming, Capstone Project I & II

SKILLS

Coding Languages: C, C++, Python, Swift, JavaScript, Java, C#, TypeScript, Bash, Jekyll, Node.js, React, Vivado, PostgreSQL

EXPERIENCE

Learning Support Services(LSS) tutor at UCSC(January 2025 – June 2025):

- Working with students in a logic design (CSE 100) at UCSC
- Holding 3 sessions a week and tutoring around half a dozen students
- Effectively designed course material to support my students building their confidence and over performance with the course content

Non-Profit Smart Politics Website (June 2024 – January 2025):

- Created a website for Smart Politics which is a non-profit organization that tries to connect people despite their political beliefs
- Working with a project manager to get all of the socials, and newsletter plugins to work correctly help me hone my proficiency with **Wix**, and my ability to implement my project manager's goals for the site

Neuromorphic Computing Group Research Assistant (September 2025 – Present):

- Implementing and testing **parallel cumulative sum** operations in **snnTorch** for faster spiking neural network computation
- Contributing to **GPU energy profiling** to analyze power use during AI model inference
- Engaging in weekly discussions to propose **scalable and efficient approaches** for neuromorphic algorithms

Projects

Angry Uncle Bot — React, Vite, OpenAI API, Vercel (June 2025 – Present):

- Developed the site with **React**
- Used **Vercel** to run the serverless API calls, and to deploy the website
- Developed a conversation-based web tool using **OpenAI's** ChatGPT
- Engineered prompt instructions to ensure tone consistency and accuracy

Personal Portfolio Website — React, Node.js (January 2024 – Present):

- Built a personal website with **React** to strengthen my understanding of this industry-leading framework
- React allows my website to run quickly, while still having access to important libraries
- Using Node.js made it easy to deploy and render content dynamically

Spotify to YouTube Music Converter — React, Vite, Vercel, OAuth (June 2024 – January 2025):

- Developed the site using **React** and **Vite**
- Used **Vercel** to run the serverless API calls, and to deploy the website
- Collaborated with a partner; I focused on API calls and OAuth 2.0 authentication

Smart Pill Dispenser — React Native, Firebase (January 2025 – June 2025):

- Led development of a mobile-friendly web app for a smart pill dispenser system
- Designed Firestore database schema and built front-end UI with **React Native**
- Coordinated with teammates responsible for the embedded system component
